

Innovators Not Imitators

Designed for bottom coding because bottom coding shouldn't be an afterthought!

The **KT05** is a conveyor that has been designed to print on the bottom of any product. It allows for easy access to the printhead without the need for additional brackets. The **KT05** also has several advantages besides the bottom coding. Several advantages over the competition are...

1. It can print on the top and the side of any product.
2. Easily transportable between production lines.
3. Proudly made in the USA.

4. Quick setup for different sizes of any product up to 6-1/2" to maintain maximum holding area.
5. Pickup area is not compromised unlike many other "bottomless" conveyor systems.
