

INNOVATIVE PACKAGING TAKES MANY SHAPES.

Nature has devised many creative forms of protection. And at Alcan Packaging, we are inspired to develop equally innovative solutions. In addition to being the leading supplier of ultra-high barrier, cold-formable FORMPACK® material to the pharmaceutical and healthcare industries, Alcan Packaging is proud to announce the product extension of two complete families of thermoformable Polybar® – ACLAR® and Polybar® – COC films. Either opaque or transparent, these base web films offer you tailored solutions for mid- to high barrier packaging requirements.

These new product capabilities uniquely position Alcan Packaging to be your global one-stop blister pack supplier, including a complete range of both top web lidding materials (push through and child resistant versions) and mid- to ultra-high barrier films and foils for base web applications. These materials can also be incorporated into pouches and strip packs.

Our global manufacturing competence, particularly in the lamination of flexible packaging structures, will serve both existing and new generation Polybar® – ACLAR® and Polybar® – COC films. Driven by extensive R&D in Europe and North America, we will continue to lead with innovations in areas such as cavity modeling and new barrier products.

With U.S. \$6 billion in sales and more than 144 plants in 30 countries, Alcan Packaging offers total packaging solutions, transforming aluminum, plastics, paper, paperboard, glass and steel into industrial and consumer branded products.

ACLAR® is a registered trademark of Honeywell International Inc.
